Research and Development Projects

Circuit Centre Inc has a very active R&D program focused on developing and extending the frontiers of electronics assembly and test technologies.

Below is a sample of the current R&D projects conducted by our R&D team of engineers and technicians. Please call us for further details on the ongoing and future projects.

- Development of a process for replacing BGA's on non-coplanar surfaces
- Development of tilt controllers

ISO 9001-2008 Certified
